

HW 13 a,b on displaying data from multiple tables

✓ Published

 Edit

⋮ _

1. When should we use self join?

2. Select * from Employees1

Empno	Ename	Title	Mgr
1	n1	t1	3
2	n2	t2	3
3	n3	t3	6
4	n4	t4	3
5	n5	t5	6
6	n6	t6	3

We want the result as shown below:

employee	manager
n1	n3
n2	n3
n3	n6
n4	n3
n5	n6
n6	n3

What query or queries can be used to get the above result?

A)

```
Select emp.ename as employee, manager.ename as manager
from Employees1 as emp
join
Employees1 as manager
on emp.Mgr = manager.Empno
```

B)

```
Select emp.ename as employee, manager.ename as manager
from Employees1 as emp
inner join
Employees2 as manager
on emp.Mgr = manager.Empno
```

C)

```
Select emp.ename as employee, manager.ename as manager
from Employees1 as emp
inner join
Employees1 as manager
on emp.Mgr = emp.Empno
```

D)

```
Select emp.ename as employee, manager.ename as manager
from Employees1 as emp
inner join
Employees1 as manager
on emp.Mgr = manager.Empno
```
