output: pdf_document
```

Use the database `crawling_db`. Refer to the page "Data used in this module" for a description of the data and where you can download it. Oracle users do not need to download anything.

1. Read all three fields and all records
2. Change Temperature to `Temperature_F`
3. Put your code and the output in a single PDF file

```
```{r}
library(sqldf)
db <- dbConnect(SQLite(),
 dbname="../data/crawling_db.sqlite")
crawling_data <- dbGetQuery(conn=db,
 "select
 Birth_month,
 Temperature as Temperature_F,
 avg_crawling_age
 from crawling_table")
crawling_data
dbDisconnect(conn=db)
```
```

Use the database `crawling_db`. Refer to the page “Data used in this module” for a description of the data and where you can download it. Oracle users do not need to download anything.

1. Read all three fields and all records
2. Change Temperature to Temperature_F
3. Put your code and the output in a single PDF file

```
library(sqldf)
```

```
## Loading required package: gsubfn
```

```
## Loading required package: proto
```

```
## Loading required package: RSQLite
```

```
db <- dbConnect(SQLite(),
  dbname="../data/crawling_db.sqlite")
crawling_data <- dbGetQuery(conn=db,
  "select
    Birth_month,
    Temperature as Temperature_F,
    avg_crawling_age
  from crawling_table")
crawling_data
```

```
##      Birth_month Temperature_F avg_crawling_age
## 1      January           66          29.84
## 2     February           73          30.52
## 3       March           72          29.70
## 4       April           63          31.84
## 5        May           52          28.58
## 6       June           39          31.44
## 7       July           33          33.64
## 8      August           30          32.82
## 9    September           33          33.83
## 10   October           37          33.35
