

Module02 Homework, Q01

Steve Simon

Dates: This file was created on 2021-01-23 and last modified on 2021-06-26.

Purpose: Answer M02-Q01. Use table patient_type in EHR data mart. Order all the fields by Pat_type_desc and print just the first four rows from the table.

Note: To emphasize which names can be modified at your discretion, I am using names of famous statisticians. The statistician being honored in this code is Florence Nightingale.

```
library(sqldf)
```

```
## Loading required package: gsubfn
```

```
## Loading required package: proto
```

```
## Loading required package: RSQLite
```

```
florence <- dbConnect(SQLite(),  
  dbname="../data/ehr.sqlite")  
nightingale <- dbGetQuery(conn=florence,  
  "select *  
    from patient_type  
    order by Pat_type_desc  
    limit 4")  
nightingale
```

```
##   PAT_TYPE_ID PAT_TYPE_DESC  
## 1          78      Clinic  
## 2          79  Community  
## 3          84  Emergency  
## 4          87   Inpatient
```

```
dbDisconnect(conn=florence)
```
